

# BLACK PET: No need for custom runs, ZL stocks it!

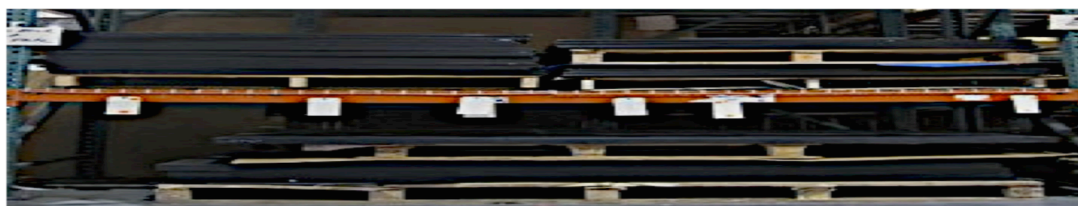

ZL Quarterly July '11

Typically, most **Black PET** requirements may come with extended lead-times due to the fact that this is not a standard stocked item by some. Along with our Natural (**ZL 1400**) and Internally Lubricated PET (**ZL 1400T**) line, **ZL** also stocks a wide range of plate and rod sizes in **Black PET (ZL 1400 BLK)**!

PET in itself provides: wear resistance in both wet and dry environments, superb sliding properties, low moisture absorption, no centerline porosity, and excellent dimensional stability. Use Black PET when your application requires a material to retain its appearance when exposed to UV light, or discoloration that may occur due to friction or lubricants.

## Do MORE with LESS!

**ZL Acetal Tubing** is available in both Natural and Black. O.D.s' from 25mm to 500mm and I.D.s' from 15mm to 375mm

Not all sizes mentioned above are stocked sizes. Please contact your **ZL** representative for current stock and availability.

### Is your customer...

- Boring out the center of solid rod?
- Putting unnecessary stress on solid rod due to machining?
- Wasting material due to bad yields?
- Wasting time on machining?

### Offer ZL Acetal Tubing to...

- Lower out-the-door costs
- Reduce chances of damaging material
- Increase yield
- Greener for the environment due to less potential scrap

### Success Story:

**Problem:** Machine shop was purchasing 2" thick natural Acetal plate for 12.5" OD x 9" ID bearings. They were spending excessive time on machining and wasting material due to poor yields.

**Solution:** Provided **ZL** Acetal Tubing cut to 2" thick blanks to increase yield and productivity!

The next time your customer asks for solid rod, ask the next question; "Are you boring out the center?" If so, offer **ZL** tubing to secure the business!
